SUSTAINABILITY

- **Natural and Renewable Materials:** Our grasscloth wallcoverings are made from natural seagrass fibres. These fibres are renewable resources, as they come from plants that can be replanted and harvested sustainably.
- **Grasscloth and natural wallcoverings are biodegradable,** meaning they can naturally break down over time without causing harm to the environment. They can also be composted, reducing waste and landfill burden.
- **Low VOC and Non-Toxic:** Many grasscloth and natural wallcoverings are manufactured using water-based adhesives and inks with low volatile organic compound (VOC) content. This reduces indoor air pollution and improves indoor air quality, making it healthier for occupants.
- **No PVC or Vinyl:** Grasscloth and natural wallcoverings are generally free from PVC (polyvinyl chloride) and vinyl, which are materials commonly found in traditional wallcoverings. Avoiding PVC and vinyl reduces the use of harmful chemicals and synthetic materials.

BATCHING & DELIVERY

Natural resource wallcovering advantages

- Anti-microbial features – Grasscloth and natural wallcoverings contain bactericides and mildew inhibitors to discourage the growth of mold and mildew under normal conditions.
- Paste-The-Paper – Made from both natural fibres. These wallcoverings will expand from the adhesive. Simply apply the paste directly to the paper, be generous but avoid excessive paste. They will expand with booking time required.
- Book the wallcovering – “Booking” is a process where you fold the pasted sides of the wallcovering together, adhesive-to-adhesive, with the pasted side facing inwards. This allows the paste to activate and helps prevent it from drying out before you hang the wallcovering. Leave the booked wallcovering a few minutes.
- The wallcovering rolls are finished precisely to have no overlap. Meaning the panels simply butt up to each other for ease of installation.
- Cleanable – Dirt, dust and other marks can be simply cleaned using a damp cloth with soapy water or with a light vacuum to remove surface dirt.
- Wet removal – is a common method for removing grasscloth wallcovering. However, because grasscloth and natural is made from natural material, it can be delicate and requires a bit of extra care during the removal process to avoid damaging the walls.
- Roll Size – 24ft (7.3m) x 3ft (91.4cm).

Natural resource wallcovering advantages

- Anti-microbial features – Grasscloth and natural wallcoverings contain bactericides and mildew inhibitors to discourage the growth of mold and mildew under normal conditions.
- Paste-The-Paper – Made from both natural fibres. These wallcoverings will expand from the adhesive. Simply apply the paste directly to the paper, be generous but avoid excessive paste. They will expand with booking time required.
- Book the wallcovering – "Booking" is a process where you fold the pasted sides of the wallcovering together, adhesive-to-adhesive, with the pasted side facing inwards. This allows the paste to activate and helps prevent it from drying out before you hang the wallcovering. Leave the booked wallcovering a few minutes.
- The wallcovering rolls are finished precisely to have no overlap. Meaning the panels simply butt up to each other for ease of installation.
- Cleanable – Dirt, dust and other marks can be simply cleaned using a damp cloth with soapy water or with a light vacuum to remove surface dirt.
- Wet removal – is a common method for removing grasscloth wallcovering. However, because grasscloth and natural is made from natural material, it can be delicate and requires a bit of extra care during the removal process to avoid damaging the walls.
- Roll Size – 24ft (7.3m) x 3ft (91.4cm).
